

Aim:

Write a Python program to print the statement "Hello Students" exactly twenty times using both:

- a while loop, and
- a for loop

Input Format:

- The input consists of a single integer n entered by the user, which defines how many times "Hello Students" should be printed.

Output Format:

- The output should consist of the text "Hello Students" printed exactly n times using while and for loops.

Sample Input:

Enter the number of times to print: 3

Sample Output:

```
Using while loop:
Hello Students
Hello Students
Hello Students
Using for loop:
Hello Students
Hello Students
Hello Students
```

Note: The driver code is provided for loops. Now your task is to complete the missing part of the code.

Source Code:

`hello_students_loop.py`

```
n = int(input("Enter the number of times to print: "))

# Using while loop
print("Using while loop:")
i=0
while (i<n):
    print("Hello Students")
    i+=1
# Using for loop
print("Using for loop:")
for i in range(n):
    print("Hello Students")
```

Execution Results - All test cases have succeeded!

Test Case - 1
User Output
Enter the number of times to print:
1
Using while loop:
Hello Students
Using for loop:
Hello Students

Test Case - 2
User Output
Enter the number of times to print:
3
Using while loop:
Hello Students
Hello Students
Hello Students
Using for loop:
Hello Students
Hello Students
Hello Students
